

# Manual Names labels macroalgae

At the bottom of the labels, look for a dichotomous Latin name (e.g. *Rosa canina*). Type this as it is written on the sheet. If you can't read the name properly, take a look at the website [www.algaebase.org](http://www.algaebase.org). If there is a Latin name on the labels but you can't read it, even after checking [www.algaebase.org](http://www.algaebase.org), check the incomplete transcription box. Still can't see a Latin name on the labels? Then tick the 'no label name' field.

Done!

Herbarium Gent

Coll. 1: Frederik Leliaert  
Coll. 2: Rob Anderson

Nr.: FL 492  
Sample: 4.2.16  
Date: 25.ii.1997  
Location: Kommetjie  
Cape Peninsula, South Africa  
Habitat: subtidal (-3m)  
Ecology: epilithic

Name: *Ahnfeltiopsis glomeratus*
