

Manual Names labels

At the bottom of the labels, look for a dichotomous Latin name (e.g. *Buddleja davidii*). Type this as it is written on the sheet. If you can't read the name properly, take a look at the website www.ipni.org. If there is a Latin name on the labels but you can't read it, even after checking www.ipni.org, check the incomplete transcription box. Still can't see a Latin name on the labels? Then tick the 'no label name' field.

Done!
